

## ATTRIBUTES & CAPABILITIES

### Using Enterprise RTView with Enterprise Message Service

Many of the world's leading financial institutions and other organizations have implemented TIBCO Enterprise Message Service to power their communications infrastructure. TIBCO Enterprise RTView enables your organization to leverage that investment in the following ways:

- Optimize performance and eliminate bottlenecks by monitoring platform, server, transaction and message level status and information.
- Support decision-makers by generating and displaying historical data and performing trend analysis.
- Achieve optimal performance and reliability by proactively configuring infrastructure parameters.
- Achieve visibility throughout the enterprise by deploying displays throughout the organization via web browser as Java applications, applets, interactive thin clients or enterprise portals such as TIBCO PortalBuilder™.
- Improve responsiveness to exceptional conditions by configuring alerts and thresholds.

### Using Enterprise RTView with TIBCO Rendezvous

More than 1,000 companies worldwide use TIBCO Rendezvous messaging software to ensure the efficient movement of data from system to system. With the scale and complexity of these systems increasing as large scale distributed application environments gain acceptance, customers are demanding improved visibility into their infrastructure. TIBCO Rendezvous messages ensure that their systems

maintain peak performance and integrity. TIBCO Enterprise RTView improves Rendezvous message monitoring in the following ways:

- Enables enterprises to identify and categorize transaction message data by monitoring a series of Rendezvous messages as a single transaction.
- Tracks data counts, latency and completion status, triggering alerts and prompting actions when problems arise.
- Provides archiving functionality for historical trend analysis.

### Using Enterprise RTView with TIBCO Hawk

TIBCO Enterprise RTView extends the monitoring functionality of TIBCO Hawk in the following ways:

- Provides drill-down capability to detailed agent and microagent information.
- Enables you to perform side-by-side comparisons of information from multiple agents.
- Delivers visibility into the health and status of application management interface (AMI) instrumented applications.
- Prompts immediate actions, such as the ability to invoke agent commands, based on alert notifications.
- Provides view-only access to Hawk monitoring displays that eliminate the security concerns that may occur when enabling access to Hawk directly.
- Facilitates data archiving and trend analysis.

**TIBCO Software Inc.** (NASDAQ: TIBX) is a leading independent business integration software company and a leading enabler of real-time business, helping companies become more cost-effective, more agile and more efficient. TIBCO has delivered the value of real-time business, what TIBCO calls The Power of Now®, to thousands of customers around the world and in a wide variety of industries.
